

How to survive the zombie apocalypse: A little preparation can help you survive the zombie apocalypse

First let me start of by asking you how do YOU think you can survive the zombie apocalypse? Maybe by using weapons? maybe by killing to survive? Well maybe after reading this you'll change your mind

Base on the latest research scientist believe that there is no in between humans and zombie, meaning There can't be both human and zombie.

A Canadian mathematician- Robert j. Smith choose a tongue-and-cheek scenario, the math is important as zombies likeness to the way viruses spread in the real world makes them interesting subjects for theoretical analysis of viruses epidemics. The mathematical Canadian did an equation base on what he thinks could happen. In his zombie apocalypse equation - $(bN)(S/N)Z = bSZ$ - where N represents the total population, S is the number of people susceptible to zombie attacks, Z is the number of zombies and b is the likelihood of transmission, the model shows that people would quickly become zombies.

As we all know zombies have no control over themselves and obviously can't control their actions, which would probably lead to most of you to think that they would go crazy on you and your not wrong expected for the fact that by the time the zombies get to us the world would already be taken over by them and we could not peacefully co-exist or overcome the zombie infection. **However there is no altered universe where both human and zombies would survive humanity.**

In conclusion of this essay we could never be peaceful with monsters around. We should all care about this topic because one day this could happen and we will have to be ready to face it, this topic is important to me because I believe we could change this fate and fight back, this is initial the world because not only could humanity go extinct but too can we look like the movies and have weapons and be awesome! Jk but I'm seriously, look out.

Oh my god there's a zombie behind you!!! Got you.
